

Epson Stylus Pro GS6000

Borderless Printing Kit

DATASHEET

Wallpaper image courtesy of Colorgate

Grow your business by offering creative design applications with a new borderless kit for Epson's highly successful Epson Stylus Pro GS6000. This allows existing and new users to open up new markets by taking advantage of the growing demand in signage and POS applications for interior decoration such as customised wallpapers and window graphics.

The GS6000 offers the widest colour gamut to date in a 64-inch roll-fed eco solvent printer. Designed for both outdoor and indoor applications, the GS6000 is able to switch easily between a range of different coated and non-coated substrates such as vinyl, making it an ideal, flexible solution for multiple commercial applications.

And now, with the addition of the new borderless printing kit the GS6000's capabilities are enhanced. Print with or without borders, from 300mm (11.8 inches) up to 1,590mm (62.5 inches), as required. This kit is available as an on-site upgrade, which can be performed in about an hour by an Epson service engineer. All customers need to do to get started is obtain the appropriate RIP software from their reseller.

In addition to the new business opportunities it brings, the borderless printing kit saves users money through reduced finishing time, less media wastage and reducing the need for dedicated cutting or trimming equipment.

The adaptation involves fitting a new platen which allows variable positioning of recessed porous pads to catch the overprinted ink on either edge of the media roll. A set of spacers accommodates popular media widths – including standard wallpaper sizes – while an adjustable pressure roller allows the use of both textured and non-textured media types without edge curling. The kit includes a user guide that explains how to set the spacers and pressure rollers and adjust image sizing and other print software parameters to use the borderless option correctly.
